Exercise 02

04.11.2025

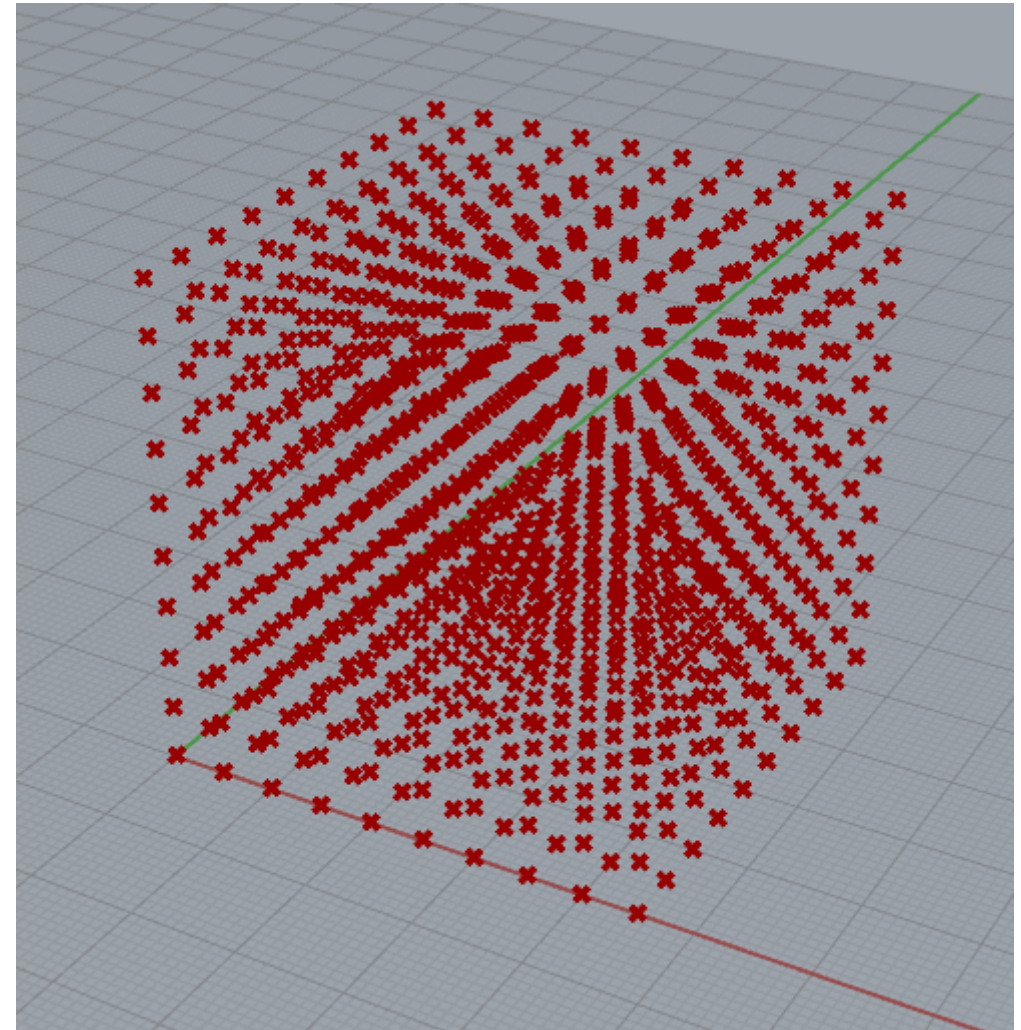

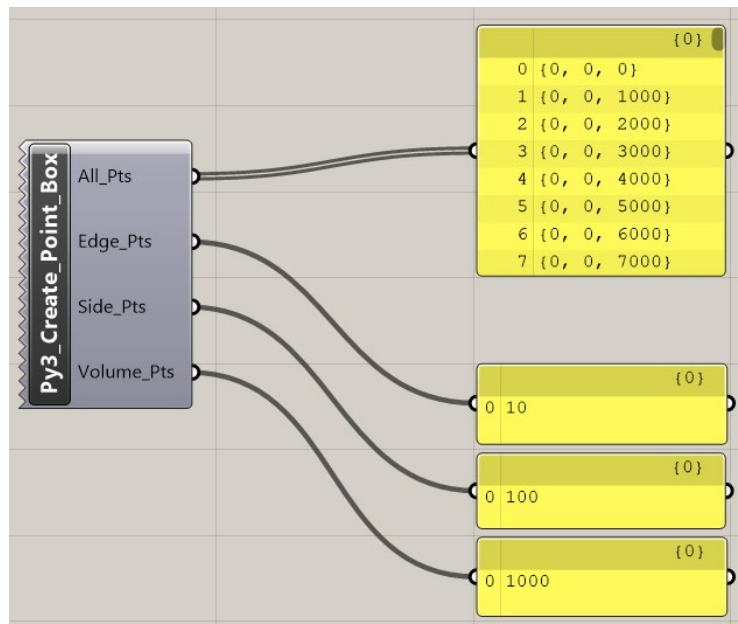

6.4 Exercise

Exercise:

Create a 3D PointBox with the size of 10x10x10 points.

Create 4 definitions to:

- 1) Show all points with their coordinates
- 2) Show the number of points per edge
- 3) Show the number of points per Face
- 4) Show the number of points in the whole Box

There are a lot of ways to get this done - try to just use the steps we did in the lecture and try to avoid to just copy the code from elsewhere...
