

# Who mourns for the dodo?

## The team

You are a **team of researchers**. You will produce a paper on the extinction of species and the effect this will have on humans in the near (or not-so-near) future. Your research should be backed by appropriate data.

## Procedure

**Make a study proposal** gathering as much articles on the topic of extinction as possible (Do not forget to administrate your sources!). Think of a proper research question and sub questions, do research using different sources both online and on paper. Produce one paper with your team and present it. Afterwards, reflect on your personal input and groupwork.

## Thoughts

A lot of species are on the brink of extinction. What will the consequences be of this extinction? Can we do without these species?

**“The proper definition of a man is: an animal that writes letters.”**

## Outcome/aim

You present your **study proposal** in the form of a physical flow chart. Make sure your proposal is appealing and clear. Define your research question, as well as sub questions and additional information such as articles.
