

Were you hit by a windmill?

Thoughts

Many types of renewable energy have severe downsides for the local environment, endangered species or are plain ordinary examples of greenwashing.

“A pair of powerful spectacles has sometimes sufficed to cure a person in love.”

- Friedrich Nietzsche

The team

You are a **group of investigative journalists**. You question the things claimed by companies and governments, trying to raise critical questions and proposing a different approach. Fact checking and reliable sources are a normal part of your investigation.

Procedure

In a team of four, **investigate** the pros and cons of locally produced energy or the activities needed for renewable energy (e.g. mining for lithium, how green is driving a Tesla, off-shore windparks, solar fields in agricultural areas?). After your research you are going to share your findings with your peers and try to come with solutions for the downsides of renewable energy.

Outcome/aim

Present your favorite form of renewable energy and what is needed to make it work.
