BRAINPORT EINDHOVEN

Have a byte, or a bit.

Thoughts
There is still plenty of debate on whether this digital age we live in is of any good for humankind. Although there are many positives to it, it comes with plenty of dangers as well, many of which are yet to be brought awareness to.

"People are fascinated by robots because they're machines that can mimic life."
- Colin Angle

The team
You are a **group of storytellers** put together. You are aware of the changes in the world and how it is going to develop more in the way it already is now. Everything around us is becoming more and more digitalised and robots are believed to be replacing human professions and roles. What will this increase of digitalisation mean to humankind? And what do you think of all that?

Procedure
Write a fictional story together with your teammates. This story can be written in book-form or as a comic. Once you start writing, you will rotate: one person writes a paragraph or draws a panel and moves it to the next person. Look at what the person before you wrote - how can you continue their part of the story?

Outcome/aim
Your eventual story (whether it be in book or in comic form) will be shared with the rest of the group.
